Allegiance Mobile Health and PHI Air Medical to Launch Air Medical Services at Bay City Regional Airport

Bay City, TX — The City of Bay City is pleased to announce that Allegiance Mobile Health, in partnership with PHI Air Medical, will launch air medical services at Bay City Regional Airport beginning in February 2026. The new service will enhance emergency medical response capabilities across the region, providing critical care when time matters most.

Allegiance Mobile Health and PHI Air Medical are the newest tenants at Bay City Regional Airport. The agreement, approved by Bay City Council during the December 16, 2025, City Council Meeting, includes the development of air ambulance crew quarters and helicopter storage facilities at the airport.

“The addition of air medical services will expand critical care access in our region where every minute counts,” said James Mason, Bay City Regional Airport Manager. “This will save lives.”

Air medical services provide rapid transport for patients experiencing severe or life-threatening medical emergencies, especially in rural areas where access to specialized care can be limited. The new operation at Bay City Regional Airport will help ensure faster access to advanced medical treatment for residents throughout Bay City and surrounding communities.

“We are excited that this emergency service will be available to the residents of Bay City,” said Scotty Jones, City Manager. “This is a big step in helping accomplish the goal of attracting businesses that complement the needs our community identified in the City’s Strategic Plan.”

The City of Bay City continues to support strategic development at Bay City Regional Airport that strengthens public safety, enhances quality of life, and promotes economic growth.
